Value-Based Health Care Delivery

Professor Michael E. Porter
Harvard Business School

University of Toronto
June 11, 2009

This presentation draws on Michael E. Porter and Elizabeth Olmsted Teisberg: Redefining Health Care: Creating Value-Based Competition on Results, Harvard Business School Press, May 2006, and “How Physicians Can Change the Future of Health Care,” Journal of the American Medical Association, 2007; 297:1103:1111. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means — electronic, mechanical, photocopying, recording, or otherwise — without the permission of Michael E. Porter and Elizabeth Olmsted Teisberg. Further information about these ideas, as well as case studies, can be found on the website of the Institute for Strategy & Competitiveness at http://www.isc.hbs.edu.
Redefining Health Care Delivery

• Universal coverage and access to care are essential, but not enough
• The core issue in health care is the value of health care delivered

Value: Patient health outcomes per dollar spent

• How to design a health care system that dramatically improves patient value
  – Ownership of entities is secondary (e.g. non-profit vs. for profit vs. government)
• How to create a dynamic system that keeps rapidly improving
Creating a Value-Based Health Care System

• Significant improvement in value will require fundamental restructuring of health care delivery, not incremental improvements

Today, 21st century medical technology is delivered with 19th century organization structures, management practices, and pricing models

- TQM, process improvements, safety initiatives, disease management and other overlays are beneficial but not sufficient to substantially improve value

- Consumers cannot fix the dysfunctional structure of the current system
Harnessing Competition on Value

• Competition is a powerful force to encourage restructuring of care and continuous improvement in value
  – Competition for patients

• Today’s competition in health care is not aligned with value

Financial success of system participants ≠ Patient success
Zero-Sum Competition in U.S. Health Care

**Bad Competition**

- Competition to *shift costs* or capture more revenue
- Competition to *increase bargaining power* and secure discounts or price premiums
- Competition to *capture patients* and restrict choice
- Competition to *restrict services*
- Competition to *exclude less healthy individuals*

**Good Competition**

- Competition to *increase value for patients*

---

Zero or Negative Sum

Positive Sum
Harnessing Competition on Value

• Competition is a powerful force to encourage restructuring of care and continuous improvement in value
  – Competition for patients

• Today’s competition in health care is not aligned with value

Financial success of system participants \(\neq\) Patient success

• Creating competition on value is a central challenge in health care reform
Principles of Value-Based Health Care Delivery

1. Set the goal as **value for patients**, not containing costs

\[
\text{Value} = \frac{\text{Health outcomes}}{\text{Costs of delivering the outcomes}}
\]

- Outcomes are the **full set of health outcomes** achieved by the patient over the care cycle
- Costs are the **total costs for the care of the patient’s condition**, not just the costs borne by a single provider
Principles of Value-Based Health Care Delivery

1. Set the goal as **value for patients**, not containing costs
2. Use **quality improvement** to drive cost containment (and value improvement), where quality is health **outcomes**

| Better health is the goal, not more treatment |
| Better health is inherently less expensive than poor health |

- Prevention of disease
- Early detection
- Right diagnosis
- Early and timely treatment
- Right treatment to the right patients
- Treatment earlier in the causal chain of disease
- Rapid care delivery process with fewer delays
- Less invasive treatment methods
- Fewer complications
- Fewer mistakes and repeats in treatment
- Faster recovery
- More complete recovery
- Less disability
- Fewer relapses or acute episodes
- Slower disease progression
- Less need for long term care
- Less care induced illness
Principles of Value-Based Health Care Delivery

1. Set the goal as **value for patients**, not containing costs
2. Use **quality improvement** to drive cost containment (and value improvement), where quality is health **outcomes**
3. Reorganize health care delivery around **medical conditions** over the full cycle of care

• A medical condition is an **interrelated set of patient medical circumstances best addressed in an integrated way**
  – Defined from the **patient’s** perspective
  – **Including** the most common co-occurring conditions
  – Involving **multiple** specialties and services

• The medical condition is the **unit of value creation** in health care delivery
Restructuring Care Delivery
Migraine Care in Germany

**Existing Model:**
Organize by Specialty and Discrete Services

**New Model:**
Organize into Integrated Practice Units (IPUs)

# The Cycle of Care

- **Breast Cancer Specialist**
- **Other Provider Entities**
Integrated Practice Models for Prevention, Wellness, Screening, and Health Maintenance (PWSM)

• Today’s primary care structures are fragmented and attempt to address overly broad needs with limited resources

• Primary care should involve defined sets of prevention, screening and wellness services in organizations with sufficient expertise and support staff to achieve high value

• Some PWSM care delivery organizations should focus on specific patient populations (e.g. elderly, type II diabetes) rather than attempt to be all things to all patients

• Care delivery structures should involve the workplace, community organizations, and other non traditional settings to leverage the efficiency and effectiveness of regular patient contact and the ability to develop a group culture of wellness
Principles of Value-Based Health Care Delivery

4. **Increase provider experience, scale, and learning** to drive value at the **medical condition level**

- The virtuous circle **extends across geography** when care for a medical condition is integrated across locations
# Fragmentation of Hospital Services

**Sweden**

Integrated Care Delivery Includes the Patient

- Value in health care is **co-produced** by patients and clinicians.
- Unless patients **comply** with care and treatment plans and take steps to improve their health, even the best delivery team will fail.
- For chronic care, patients **are often the best experts** on their own health and personal barriers to compliance.
- Today’s fragmented system creates **obstacles** to patient education, involvement, and adherence to care.
- Simply forcing consumers to pay more is a **false solution**.
- **IPUs** will improve patient engagement.
Principles of Value-Based Health Care Delivery

5. **Integrate care across facilities and across regions**, rather than Duplicate services in stand-alone units

Children’s Hospital of Philadelphia (CHOP) Affiliations

- Grand View Hospital, PA
  Pediatric Inpatient Care
- Abington Memorial Hospital, PA
  Pediatric Inpatient Care
- Chester County Hospital, PA
  Pediatric Inpatient Care
- CHILDREN’S HOSPITAL OF PHILADELPHIA
- Shore Memorial Hospital, NJ
  Pediatric Inpatient Care

• Excellent providers can manage care delivery **across multiple geographies**
Principles of Value-Based Health Care Delivery

1. Set the goal as value for patients, not containing costs
2. Use quality improvement to drive cost containment (and value improvement), where quality is health outcomes
3. Reorganize health care delivery around medical conditions over the full cycle of care
4. Increase provider experience, scale, and learning to drive value at the medical condition level
5. Integrate care across facilities and across regions, rather than duplicate services in stand-alone units
6. Measure and ultimately report value for every provider for every medical condition

- Outcomes should be measured for each medical condition over the cycle of care
  - Not for interventions or short episodes
  - Not for practices, departments, clinics, or hospitals
  - Not separately for types of service (e.g. inpatient, outpatient, tests, rehabilitation)

- Results should be measured at the level at which value is created
Measuring Value in Health Care

- **Patient Initial Conditions**
  - Protocols/Guidelines

- **Process**
  - E.g., Hemoglobin A1c levels of patients for diabetes

- **Health Indicators**
  - Protocols/Guidelines

- **(Health) Outcomes**
  - Patient Compliance

- **Patient Compliance**
The Outcome Measures Hierarchy

Tier 1
Health Status Achieved

- Survival

Tier 2
Process of Recovery

- Degree of health/recovery
- Time to recovery or return to normal activities
- Disutility of care or treatment process (e.g., discomfort, complications, adverse effects, errors, and their consequences)

Tier 3
Sustainability of Health

- Sustainability of health or recovery and nature of recurrences
- Long-term consequences of therapy (e.g., care-induced illnesses)
The Outcome Measures Hierarchy

Breast Cancer

- **Survival**
  - Survival rate
    - (One year, three year, five year, longer)

- **Degree of recovery / health**
  - Remission
  - Functional status
  - Breast conservation outcome

- **Time to recovery or return to normal activities**
  - Time to remission
  - Time to achieve functional status
  - Nosocomial infection
  - Nausea
  - Vomiting
  - Febrile neutropenia
  - Limitation of motion
  - Depression

- **Sustainability of recovery or health over time**
  - Cancer recurrence
    - Sustainability of functional status
    - Incidence of secondary cancers
  - Brachial plexopathy
  - Premature osteoporosis

- **Disutility of care or treatment process**
  - (e.g., treatment-related discomfort, complications, adverse effects, diagnostic errors, treatment errors)

- **Long-term consequences of therapy**
  - (e.g., care-induced illnesses)
Swedish Obesity Registry Indicators

Initial Conditions
- Demographics (age, sex, height, weight, BMI, waist circumference etc)
- Baseline labs – HbA1c (a measure of long-term blood glucose control), Triglycerides, Low Density Lipoprotein (bad cholesterol), High Density Lipoprotein (good cholesterol) Comorbidities (sleep apnea, diabetes, depression, etc)
- SF-36/OP-9 (validated quality of life measures)

Surgery
- Background (Previous surgeries, anesthesia risk class)
- Operation type and concurrent operations (gall bladder removal, appendix removal, etc)
- Perioperative complications
- Surgery data (surgery/anesthesia times, blood loss, etc)
- 6 week follow-up

Source: SOReg: Swedish National Obesity Registry
6-week follow-up

- Length of stay
- <30d surgical complications (bleeding, leakage, infection, technical complications, etc)
- <30d general complications (blood clot, urinary infection, etc)
- Other operations required (gall bladder, plastic surgery, etc)
- Repetition of anthropometric measurements (height, weight, waist, BMI, and change from initial)
- Diabetes labs (HbA1c)

1,2 & 5-year follow-up

- Anthropometrics and change from initial
- Labs (diabetes, triglycerides & cholesterol)
- Comorbidities, and ongoing treatments
- Delayed complications of operation (hernia, ulcer, treatment related malnutrition or anemia, etc)
- Other surgeries since registration
- SF-36/OP-9 (validated quality of life measures)

Source: SOReg: Swedish National Obesity Registry
Principles of Value-Based Health Care Delivery

1. Set the goal as **value for patients**, not containing costs
2. Use **quality improvement** to drive cost containment (and value improvement), where quality is health **outcomes**
3. Reorganize health care delivery around **medical conditions** over the **full cycle of care**
4. **Increase** provider **experience, scale**, and **learning** to drive value at the **medical condition level**
5. **Integrate care across facilities** and **across regions**, rather than duplicate services in stand-alone units
6. **Measure** and ultimately **report** value for every provider for every medical condition
7. **Align reimbursement with **value** and reward **innovation**
   - **Bundled reimbursement** for **care cycles**, not payment for discrete treatments or services
   - Time-base bundled reimbursement for **managing chronic conditions**
   - Reimbursement for **prevention, wellness, screening**, and **health maintenance** service bundles, not just treatment

   • **Providers** and **health plans** must be proactive in driving new reimbursement models, not wait for government
Reimbursement for the Cycle of Care Organ Transplantation

- Addressing organ rejection
- Fine-tuning the drug regimen
- Adjustment and monitoring

- Leading transplantation centers offer a **single bundled price**

- UCLA Medical Center was a pioneer

- In dividing the revenue from transplantation, some UCLA physicians **bear risk** and capture some of the value improvement, while others are compensated with conventional charges
Principles of Value-Based Health Care Delivery

1. Set the goal as value for patients, not containing costs
2. Use quality improvement to drive cost containment (and value improvement), where quality is health outcomes
3. Reorganize health care delivery around medical conditions over the full cycle of care
4. Increase provider experience, scale, and learning to drive value at the medical condition level
5. Integrate care across facilities and across regions, rather than duplicate services in stand-alone units
6. Measure and ultimately report value for every provider for every medical condition
7. Align reimbursement with value and reward innovation
8. Utilize information technology to enable restructuring of care delivery and measuring results, rather than treat it as a solution itself

- Common data definitions
- Precise interoperability standards
- Architecture to combine all types of data (e.g. notes, images) for each patient
- Cover the full care cycle, including referring entities
- Templates for medical conditions to enhance the user interface
- Accessible to all involved parties
Value-Based Health Care Delivery: Implications for Providers

• Organize around integrated practice units (IPUs)
  – Employ formal partnerships and alliances with other organizations involved in the care cycle

• Measure outcomes and costs for every patient

• Lead the development of new IPU reimbursement models

• Specialize and integrate services across facilities
  – Rationalize service lines/IPUs across facilities to improve volume, avoid duplication, and enable excellence
  – Offer specific services at the appropriate facility
    • e.g. acuity level, cost level, need for convenience
  – Clinically integrate care across facilities, within an IPU structure
    • Common organizational unit across facilities
  – Link preventative/primary care to IPUs

• Grow high-performance practices across regions

• Implement an integrated electronic medical record system to support these functions
Value-Based Healthcare Delivery: Implications for Health Plans

“Payor” → Value-Added Health Organization
Value-Based Health Care Delivery: Implications for Employers

• Set the goal of **employee health**
• Assist employees in **healthy living** and **active participation in their own care**
• Provide for convenient and high value **prevention, wellness, screening, and disease management** services
  – On site clinics
• Set **new expectations for payors**
  – Plans should contract for **integrated care**, not discrete services
  – Plans should contract for care **cycles rather** than single interventions
  – Plans should assist subscribers in **accessing excellent providers** for their medical condition
  – Plans should **measure** and **improve** member health results by condition, and expect providers to do the same
• Provide for **health plan continuity** for employees, rather than plan churning
• Find ways to **expand insurance coverage** and advocate **reform of the insurance system**

• Measure and hold employee benefit staff accountable for the **health value achieved** by the company
Value-Based Health Care Delivery: Implications for Suppliers

• Compete on delivering **unique value** measured over the **full care cycle**

• **Demonstrate value** based on careful study of long term outcomes and costs versus alternative approaches

• Ensure that the products are **used by the right patients**

• Work to embed drugs/devices in the **right care delivery processes**

• Market products based on **value, information, provider** support and **patient** support

• Offer services that **contribute to value** rather than reinforce cost shifting

• Move to **value-based pricing** approaches
  – e.g. price for success, guarantees
How Will Redefining Health Care Begin?

• It is already happening in the U.S. and other countries
• Steps by pioneering institutions will be mutually reinforcing
• Once competition begins working, value improvement will no longer be discretionary
• Those organizations that move early will gain major benefits

• Providers can and should take the lead
