

# Value-Based Health Care Delivery

Professor Michael E. Porter  
Harvard Business School  
[www.isc.hbs.edu](http://www.isc.hbs.edu)

*CMS Speaker Series*  
*May 20, 2011*

---

This presentation draws on Redefining Health Care: Creating Value-Based Competition on Results (with Elizabeth O. Teisberg), Harvard Business School Press, May 2006; “A Strategy for Health Care Reform—Toward a Value-Based System,” *New England Journal of Medicine*, June 3, 2009; “Value-Based Health Care Delivery,” *Annals of Surgery* 248: 4, October 2008; “Defining and Introducing Value in Healthcare,” *Institute of Medicine Annual Meeting*, 2007. Additional information about these ideas, as well as case studies, can be found the Institute for Strategy & Competitiveness Redefining Health Care website at <http://www.hbs.edu/rhc/index.html>. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means — electronic, mechanical, photocopying, recording, or otherwise — without the permission of Michael E. Porter and Elizabeth O. Teisberg.

---

# Redefining Health Care Delivery

- The core issue in health care is the **value of health care delivered**

Value: Patient health outcomes per dollar spent

- Value is the only goal that can **unite the interests** of all system participants

- How to design a health care delivery system that **dramatically improves patient value**
- How to construct a **dynamic system** that keeps rapidly improving

# Creating a Value-Based System

- Significant improvement in value will require **fundamental restructuring of health care delivery**, not incremental improvements

Today, 21<sup>st</sup> century medical technology is often delivered with 19<sup>th</sup> century organization structures, management practices, and payment models

- Process guidelines, safety programs, care coordination and other **overlays** to the current structure are beneficial, but not sufficient

# Principles of Value-Based Health Care Delivery

- The central goal in health care must be **value for patients**, not cost containment, convenience, or customer service

$$\text{Value} = \frac{\text{Health outcomes}}{\text{Costs of delivering the outcomes}}$$

- Outcomes are the **full set of patient health results** over the care cycle
- Costs are the **total costs of care for a patient's condition** over the care cycle

# Principles of Value-Based Health Care Delivery

- **Quality improvement** is the key driver of cost containment and value improvement, where quality is **health outcomes**

- Prevention of illness
- Early detection
- Right diagnosis
- Right treatment to the right patient
- Early and timely treatment
- Treatment earlier in the causal chain of disease
- Rapid cycle time of diagnosis and treatment
- Less invasive treatment methods
- Fewer complications
- Fewer mistakes
- Fewer failed therapies
- Faster recovery
- More complete recovery
- Greater functionality and less need for long term care
- Less disability
- Fewer recurrences, relapses, flare ups, or acute episodes
- Slower disease progression
- Less care induced illness

- **Better health** is the goal, not more treatment
- Better health is **inherently less expensive** than poor health

# Creating a Value-Based Health Care Delivery System

## The Strategic Agenda

1. Organize into Integrated Practice Units (IPUs) Around Patient **Medical Conditions**
  - Organize primary and preventive care to serve **distinct patient populations**
2. Establish Universal Measurement of **Outcomes** and **Cost** for Every Patient
3. Move to **Bundled Prices** for Care Cycles
4. Integrate Care Delivery Across **Separate Facilities**
5. Expand Excellent IPUs **Across Geography**
6. Create an Enabling **Information Technology Platform**

# 1. Organizing Around Patient Medical Conditions

## Migraine Care in Germany

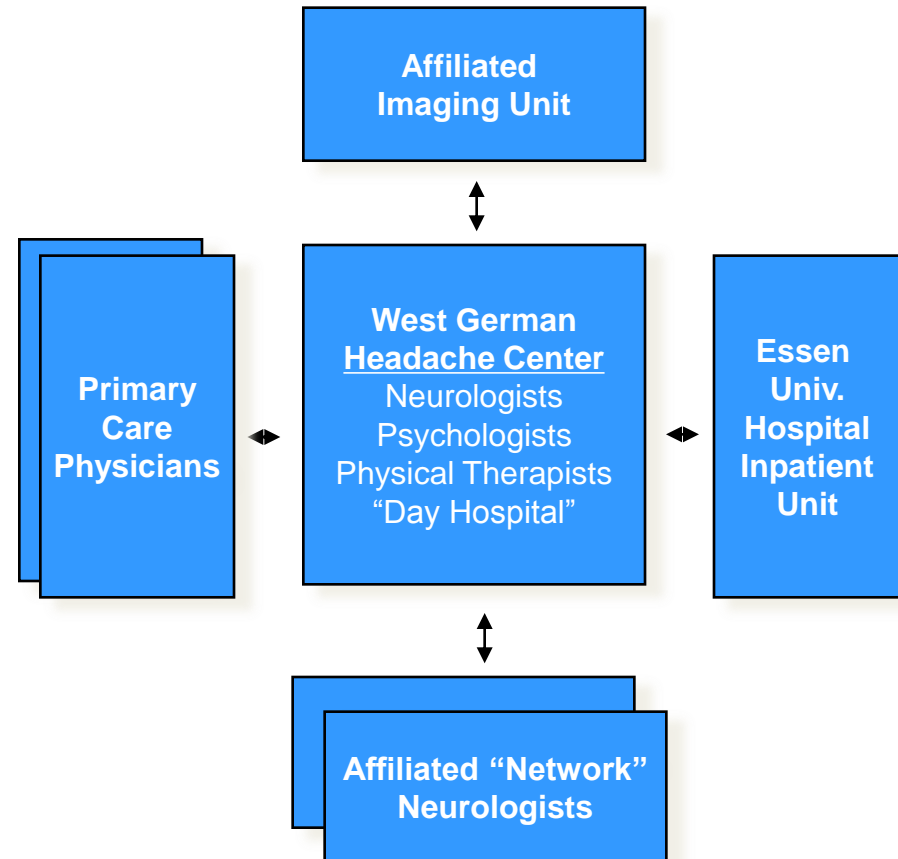

### Existing Model:

Organize by Specialty and Discrete Services

### New Model:

Organize into Integrated Practice Units (IPUs)

Source: Porter, Michael E., Clemens Guth, and Elisa Dannemiller, *The West German Headache Center: Integrated Migraine Care*, Harvard Business School Case 9-707-559, September 13, 2007

# Integrating Across the Cycle of Care

## Breast Cancer

# What is Integrated Care?

## Attributes of an Integrated Practice Unit (IPU):

1. Organized around the **patient's medical condition**
2. Involves a **dedicated, multidisciplinary team** who devote a significant portion of their time to the condition
3. Where providers are part of a **common organizational unit**
4. Utilizing a **single administrative** and **scheduling structure**
5. Providing the **full cycle of care** for the condition
  - Encompassing **outpatient, inpatient,** and **rehabilitative** care as well as **supporting services** (e.g. nutrition, social work, behavioral health)
  - Including **patient education, engagement** and **follow-up**
6. **Co-located** in **dedicated facilities**
7. With a **physician team captain** and a **care manager** who oversee each patient's care process
8. Where the team **meets formally and informally** on a regular basis
9. And **measure** outcomes, processes, and costs as a **team** using a common **information platform**
10. Accepting **joint accountability** for outcomes and costs

# Volume in a Medical Condition Enables Value

- Volume and experience will have an even greater impact on value **in an IPU structure** than in the current system

# Fragmentation of Services

## Hospital Services in Sweden

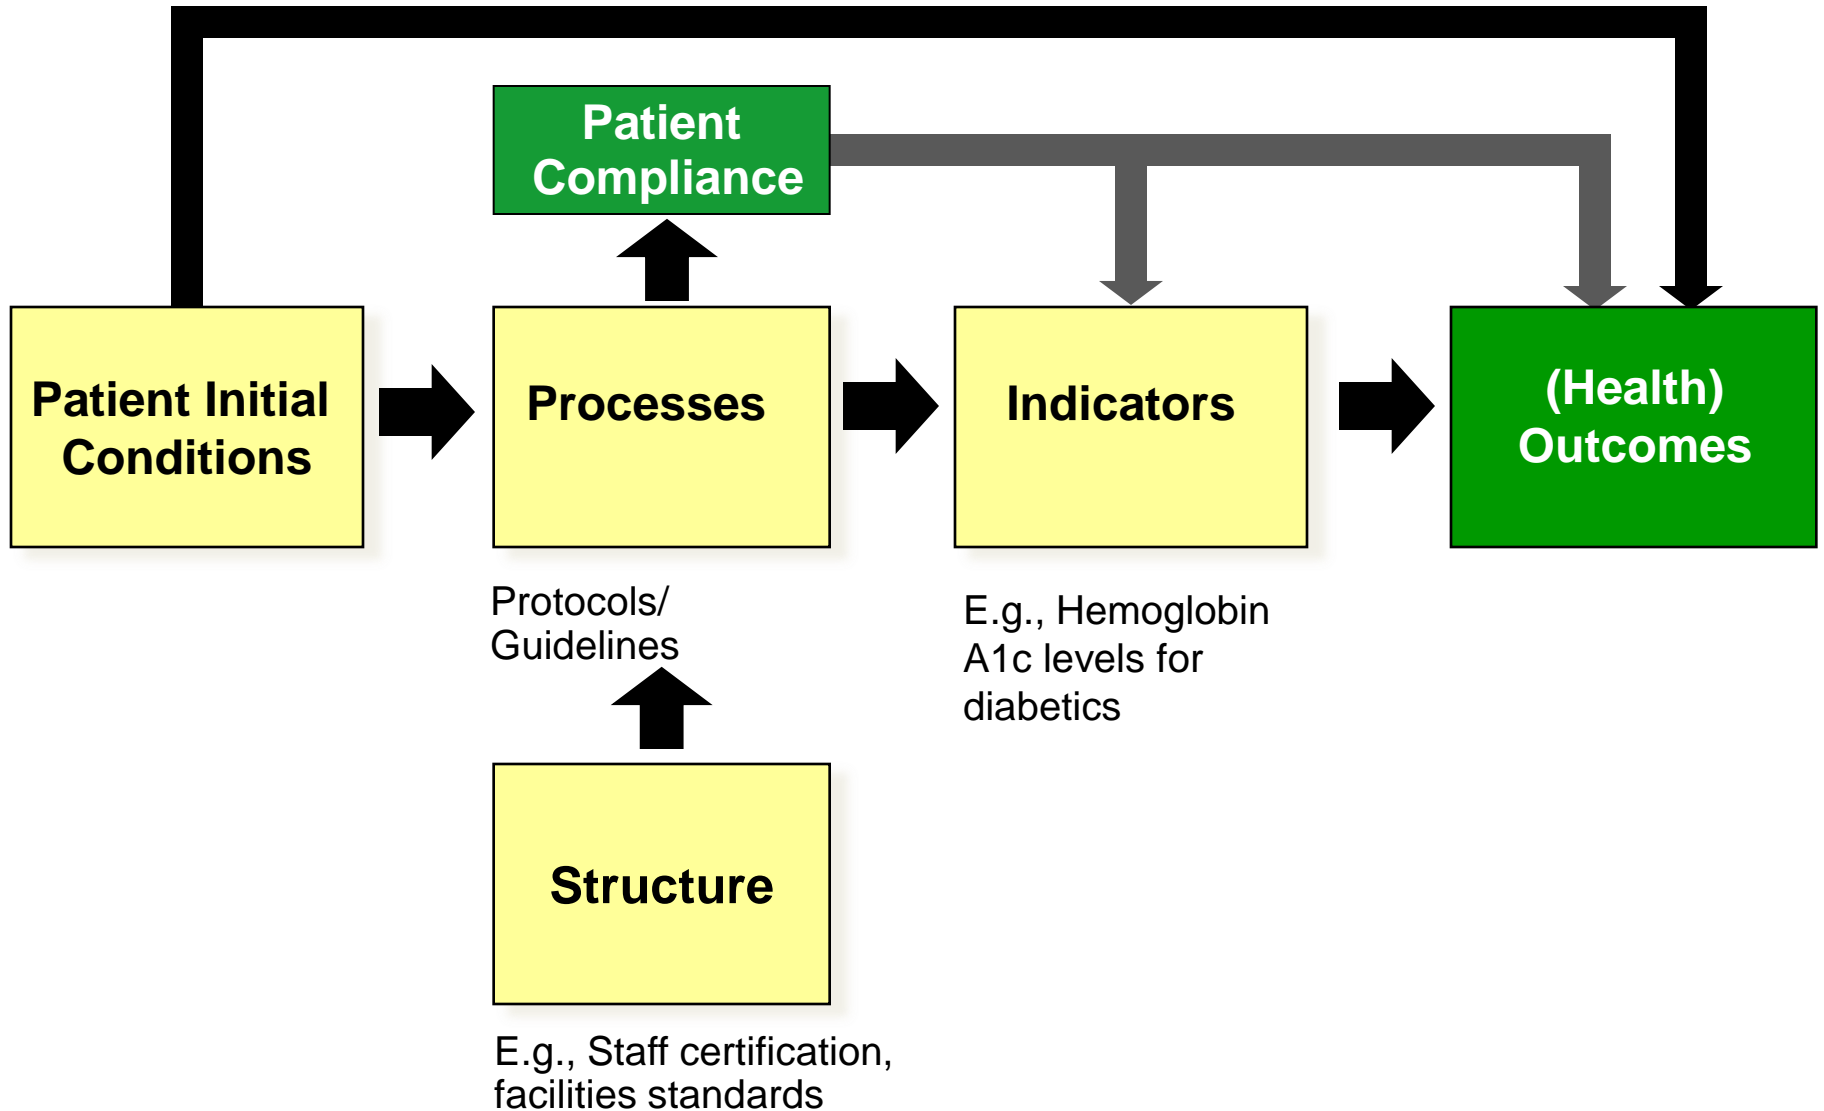

DRG	Number of admitting providers	Average percent of total national admissions	Average admissions/ provider/ year	Average admissions/ provider/ week
Knee Procedure	68	1.5%	55	1
Diabetes age > 35	80	1.3%	96	2
Kidney failure	80	1.3%	97	2
Multiple sclerosis and cerebellar ataxia	78	1.3%	28	1
Inflammatory bowel disease	73	1.4%	66	1
Implantation of cardiac pacemaker	51	2.0%	124	2
Splenectomy age > 17	37	2.6%	3	<1
Cleft lip & palate repair	7	14.2%	83	2
Heart transplant	6	16.6%	12	<1

Source: Compiled from The National Board of Health and Welfare Statistical Databases – DRG Statistics, Accessed April 2, 2009.

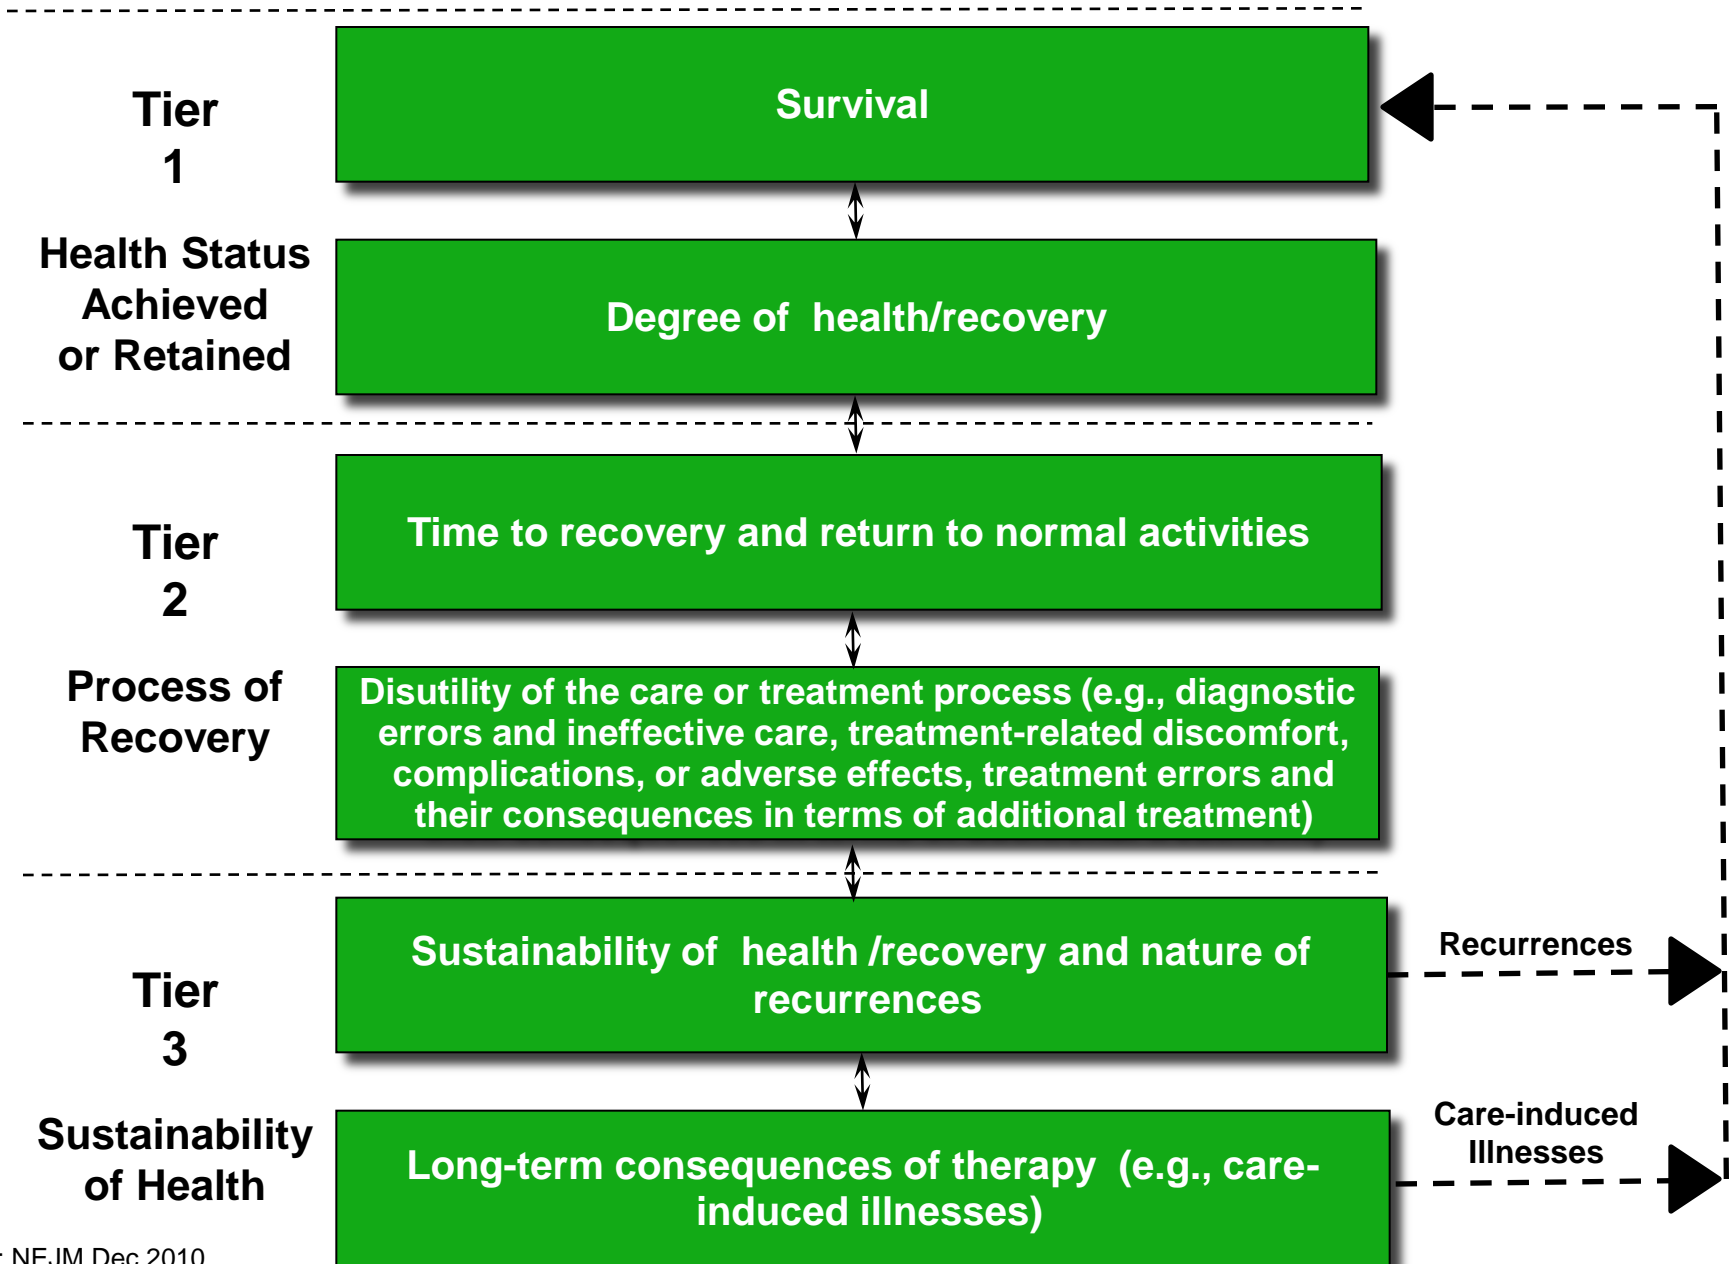

- **Minimum volume standards** are an interim step to drive service consolidation until comprehensive outcome information is available

## 2. Measuring Outcomes and Cost for Every Patient

# The Outcome Measures Hierarchy

# The Outcome Measures Hierarchy

**Survival**

## Breast Cancer

- Survival rate  
(One year, three year, five year, longer)

**Degree of recovery / health**

- Degree of remission
- Functional status
- Breast conservation
- Depression

**Time to recovery or return to normal activities**

- Time to remission
- Time to functional status

**Disutility of care or treatment process  
(e.g., treatment-related discomfort, complications, adverse effects, diagnostic errors, treatment errors)**

- Nosocomial infection
- Nausea/vomiting
- Febrile neutropenia
- Suspension of therapy
- Failed therapies
- Limitation of motion
- Depression

**Sustainability of recovery or health over time**

- Cancer recurrence
- Sustainability of functional status

**Long-term consequences of therapy (e.g., care-induced illnesses)**

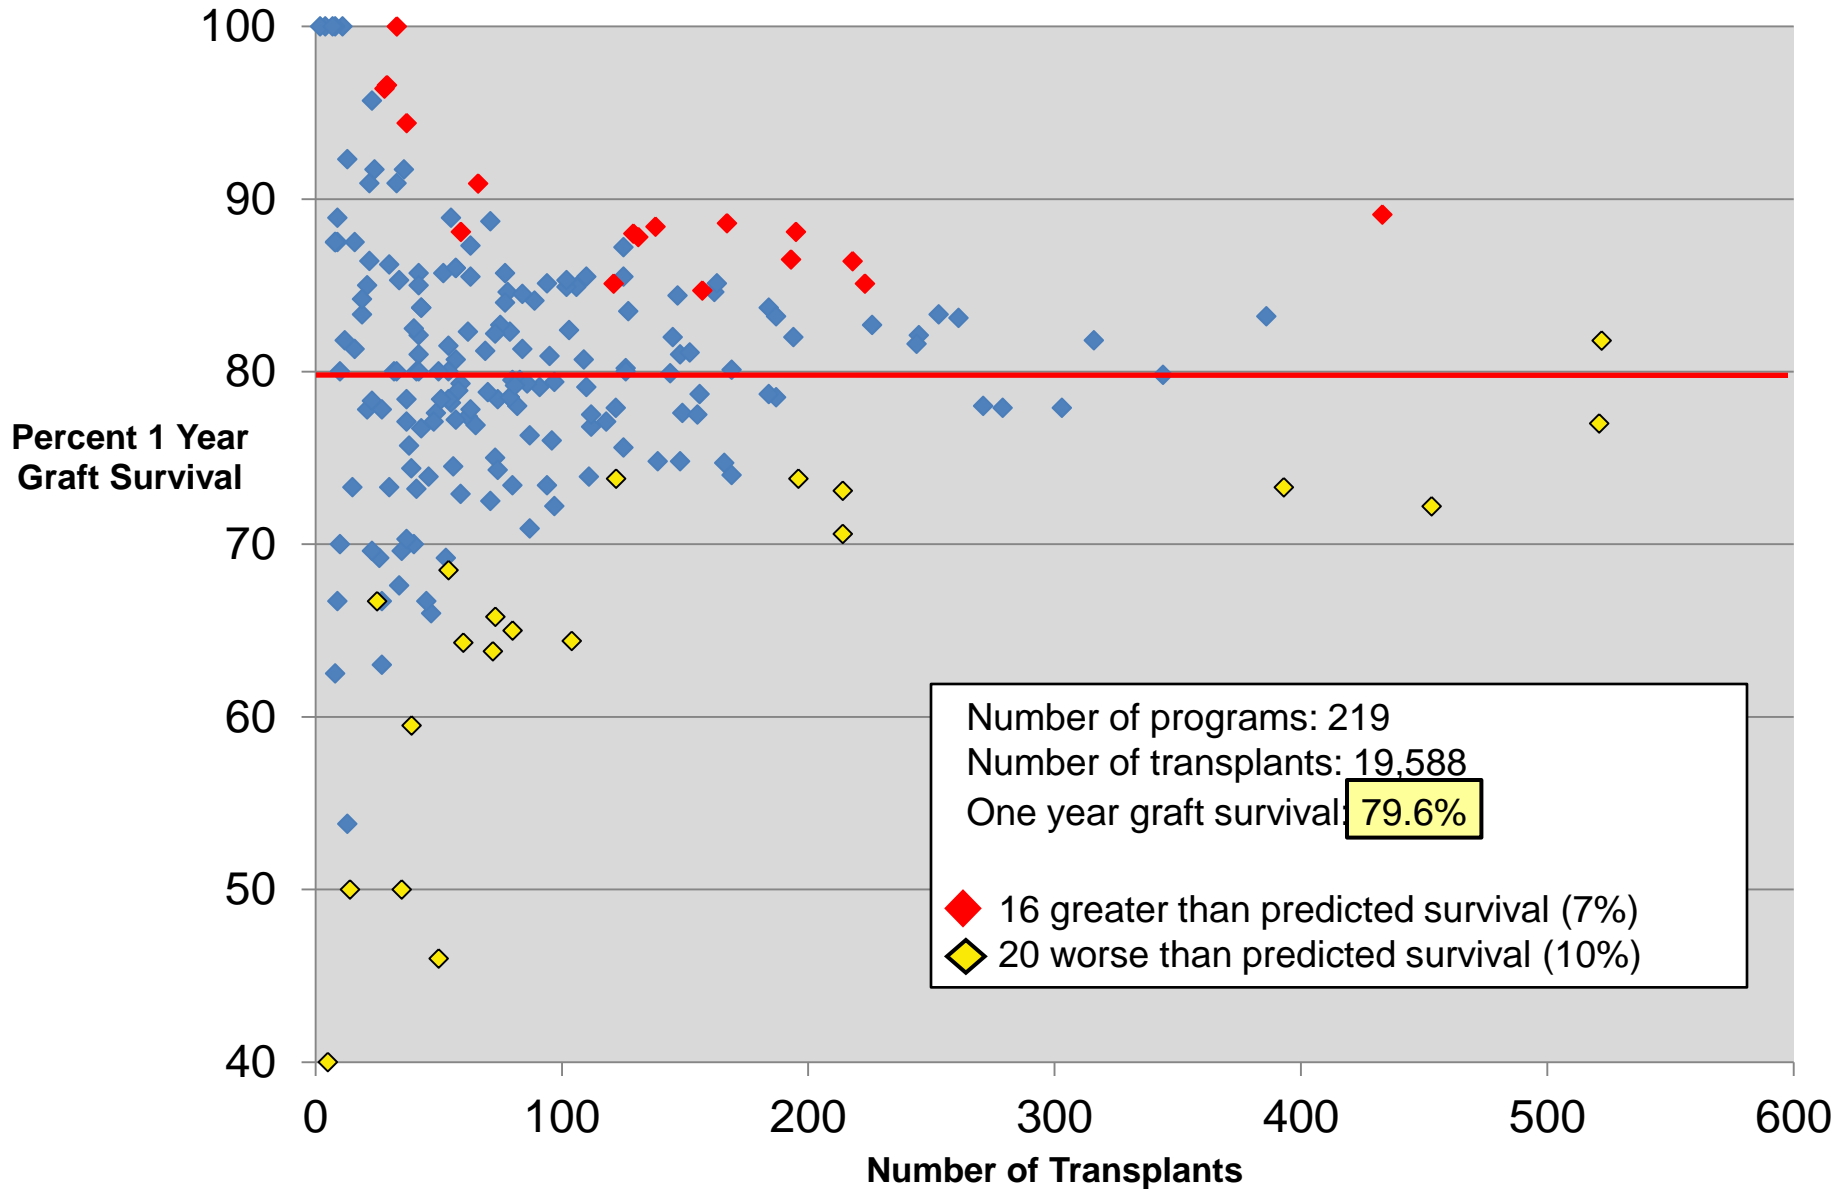

- Incidence of secondary cancers
- Brachial plexopathy
- Fertility/pregnancy complications
- Premature osteoporosis

## Initial Conditions/Risk Factors

- Stage upon diagnosis
- Type of cancer (infiltrating ductal carcinoma, tubular, medullary, lobular, etc.)
- Estrogen and progesterone receptor status (positive or negative)
- Sites of metastases
- Previous treatments
- Age
- Menopausal status
- General health, including co-morbidities
- Psychological and social factors

# Adult Kidney Transplant Outcomes

## U.S. Centers, 1987-1989

# Adult Kidney Transplant Outcomes

## U.S. Centers, 2005-2007

# Registries and Outcome Measurement: Next Steps for CMS

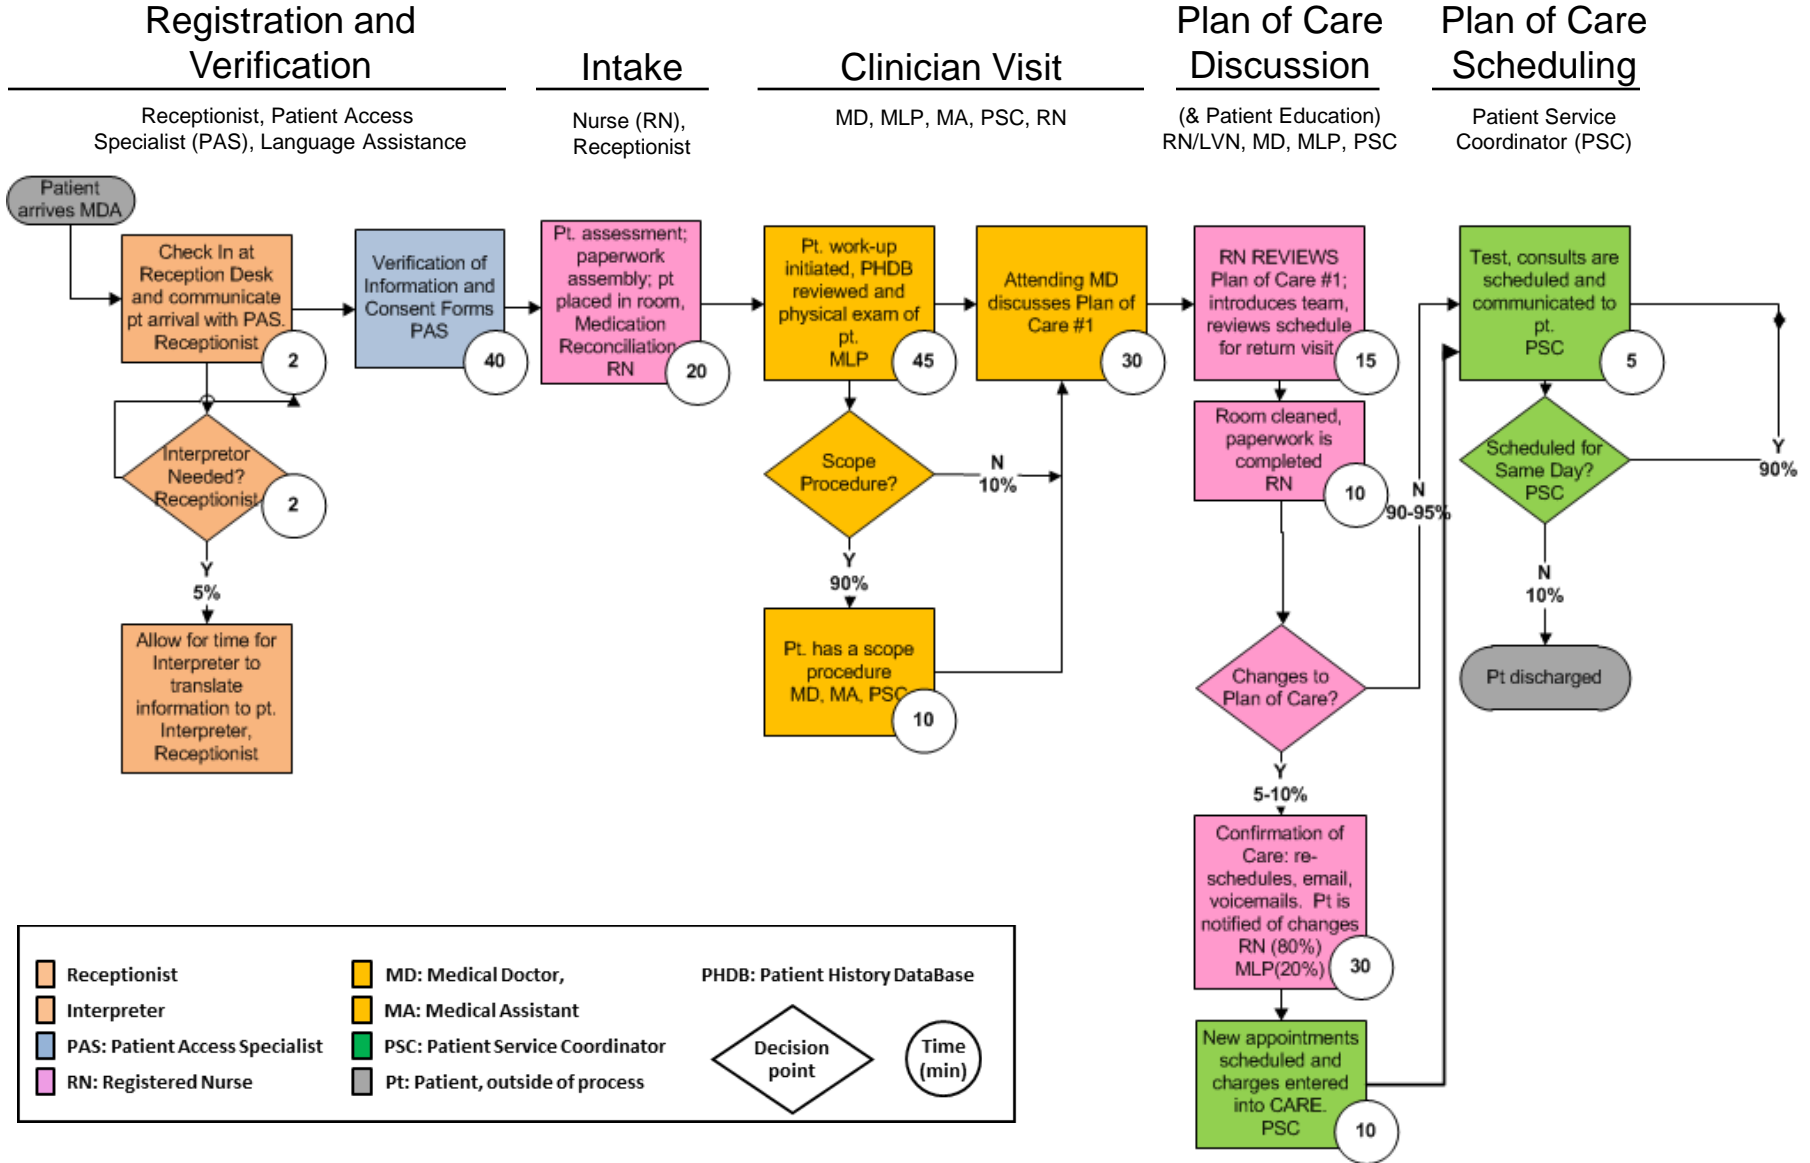

1. Define the appropriate **units of measurement**
  - Organize registries around medical conditions and patient populations
2. Provide **matching funds** to develop or improve registries that meet certain criteria:
  - Outcomes focused
  - Path to transparency
3. Fund or create a **registry think tank**
  - Provide consulting / technical assistance
  - Share best practices
  - Develop **common tools** that can be taken “off the shelf” (e.g. data auditing)
4. Create a **registry of registries** to coordinate all registry activity
  - E.g. Common data depository
  - Standardize reporting protocols
5. Address **policy hurdles** to registry functions
  - Privacy rules, IT standards, National patient identifier
6. Create a **business model / motivation** for registry reporting
  - Tie reporting to new reimbursement methods (Bundled payments, Accountable Care Organizations)
  - Tie to current reimbursement
  - Tie to provider certification or professional recognition

# Measuring the Cost of Care Delivery: Principles

- Cost should be measured around the **patient**
- Cost depends on the **actual use of resources** involved in a patient's care
- The only way to properly measure cost per patient is to track the **time devoted to each patient** by these resources (personnel, facilities, and support services) and their **capacity cost**.

# Mapping Resource Utilization

## MD Anderson Cancer Center

# Measuring the Cost of Care Delivery: Principles

- Cost should be measured around the **patient**
  - Cost depends on the **actual use of resources** involved in a patient's care
  - The only way to properly measure cost per patient is to track the **time devoted to each patient** by these resources (personnel, facilities, and support services) and their **capacity cost**.
  - Cost should be aggregated for the **medical condition level** for each patient **over the full cycle of care**, not for departments, services, or line items
  - Cost measurement should be combined with **outcome measurement** to inform process improvement and cost reduction
    - E.g. Reduce high cost activities that **do not contribute** to superior outcomes
    - Optimize the value of the **entire cycle of care**, versus seek to minimize the cost of individual activities
    - **Speed up** cycle time
- 
- Combining actual costs and outcomes will **transform the discussion** about care improvement

### 3. Setting Bundled Prices for Care Cycles

#### Bundled Price

- A single price covering the **full care cycle for an acute medical condition**
- Time-based reimbursement for full care of a **chronic condition**
- Time-based reimbursement for **primary/preventive care for a defined patient population**

# Bundled Payment in Practice

## Hip and Knee Replacement in Stockholm, Sweden

- **Components** of the bundle

- |                                 |   |
|---------------------------------|---|
| - Pre-op evaluation             | - All physician and staff fees and costs  |
| - Lab tests                     | - 1 follow-up visit within 3 months   |
| - Radiology                     | - Any additional surgery to the joint within 2 years                              |
| - Surgery & related admissions  | - If post-op infection requiring antibiotics occurs, guarantee extends to 5 years |
| - Prosthesis                    |   |
| - Drugs                         |   |
| - Inpatient rehab, up to 6 days |   |

- Currently applies to all **relatively healthy patients** (i.e. ASA scores of 1 or 2)
  - The same **referral process** from PCPs is utilized as the traditional system
  - **Mandatory reporting** by providers to the joint registry plus supplementary reporting
  - Provider participation is **voluntary**. All providers are participating
- 
- The Stockholm bundled price for a knee or hip replacement is about **US \$8,000**

# Bundled Payment vs. Global Capitation

## Medical Condition Capitation

- Fosters **integrated care delivery** (IPUs)
- Focuses providers on **areas of excellence**
- Drives provider control and accountability for outcomes **at the medical condition level**
- Creates **strong incentives to improve value**
- Ties payment to what providers can **directly control**

- Aligns reimbursement with **value creation**
- Accelerates care delivery **integration**

## Global Capitation

- Shifts overall **insurance risk to providers**
- Encourages **overly broad services lines** and large, dominant provider systems
- Introduces pressure to **limit / restrict services**
- Reinforces provider incentive to **attract generally healthy patients**
- **Decouples payment** from what providers can **control**

- Aligns reimbursement with managing **insurance risk**
- **Complicates** true care delivery integration

# 4. Integrating Care Delivery Across Separate Facilities

## Children's Hospital of Philadelphia Care Network

 The Children's Hospital of Philadelphia®

**Network Hospitals:**

-  CHOP Newborn Care
-  CHOP Pediatric Care
-  CHOP Newborn & Pediatric Care

**Wholly-Owned Outpatient Units:**

-  Pediatric & Adolescent Primary Care
-  Pediatric & Adolescent Specialty Care Center
-  Pediatric & Adolescent Specialty Care Center & Surgery Center
-  Pediatric & Adolescent Specialty Care Center & Home Care

# Integrating Provider Systems

- Choosing the **overall scope of service lines** in which a provider can achieve excellence
- **Rationalizing service lines / IPUs** across facilities to improve volume, avoid duplication, and deepen teams
- Offering specific services at the **appropriate facility**
  - E.g. acuity level, resource intensity, cost level, need for convenience
- Clinically integrating care **across facilities**, within an IPU structure
  - Better **connecting** preventive/primary care units to specialty IPUs
  - **Widening** and **integrating** the care cycle

- There are major value improvements from **moving care out** of heavily resourced hospital, tertiary and quaternary facilities

## 5. Expanding Excellent IPUs Across Geography

### Leading Providers

- Grow **areas of excellence across locations:**
  - Satellite pre- and post-acute services
  - Affiliations with community providers
  - New IPU hubs
- **NOT**
  - Widening the service line locally
  - Growing through new broad line, stand-alone units

### Community Providers

- **Affiliate with excellent providers** in medical conditions and patient populations where there is insufficient volume or expertise to achieve superior value
  - New roles for rural and community hospitals

## 6. Building an Enabling Information Technology Platform

Utilize information technology to enable **restructuring of care delivery** and **measuring results**, rather than treating it as a solution itself

- Common **data definitions**
- Combine **all types of data** (e.g. notes, images) for each patient
- Data encompasses the **full care cycle**, including care by referring entities
- Allow access and communication among **all involved parties**, including patients
- **Templates** for medical conditions to enhance the user interface
- **“Structured”** data vs. free text
- Architecture that allows easy extraction of **outcome measures**, **process measures**, and **activity based cost measures** for each patient and medical condition
- Interoperability standards enabling communication among **different provider** (and payor) **organizations**

# Creating a Value-Based Health Care Delivery System

## The Strategic Agenda

1. Organize into Integrated Practice Units (IPUs) Around Patient **Medical Conditions**
  - Organize primary and preventive care to serve **distinct patient populations**
2. Establish Universal Measurement of **Outcomes** and **Cost** for Every Patient
3. Move to **Bundled Prices** for Care Cycles
4. Integrate Care Delivery Across **Separate Facilities**
5. Expand Excellent IPUs **Across Geography**
6. Create an Enabling **Information Technology Platform**

# Accountable Care Organizations and Value

## Potential

- **Promote integration** across full cycles of care **for medical conditions**
  - Accelerate standardized **results measurement** and reporting for medical conditions
    - E.g. disease registries, cost measurement
  - Enable choice of providers by patients and referring physicians based on **medical condition results**
  - Facilitate **bundled payment** at the medical condition level
- 
- Promote **value-based competition among multiple providers** for each condition

## Risks

- Slightly **improved coordination** rather than true integration
    - I.e. streamlining patient handoffs rather than minimizing handoffs
  - Create numerous **ACO-level** measurement and reporting systems, which reduce accountability rather than increase it
    - And wrong measures at wrong levels
  - Lock patients into an ACO system for **all types of care**, regardless of performance
    - Encourage hospitals or provider systems to offer full service lines to avoid “losing” patients
  - ACOs lead reimbursement to **global capitation**
- 
- Promote **over-consolidation** into large “integrated delivery systems” that compete on bargaining power rather than value

# Moving to a Value-Based System

## Leverage Points for Government

- 1. Organize into Integrated Practice Units (IPUs) Around Patient Medical Conditions and Patient Populations**
  - Provider **certification** based on **care integration measures** (e.g. multidisciplinary teams, unified outcome measurement, dedicated facilities)
  - Reduce **regulatory obstacles** to care integration (e.g. Stark Laws, corporate practice of medicine)
- 2. Establish Universal Measurement of Outcomes and Cost for Every Patient**
  - Create a **national outcome registry framework**
  - Tie reimbursement to registry **reporting**
  - Require provider reporting of **patient volume by medical condition** as an interim step
  - **Reset reimbursement levels** based on modern cost accounting principles
- 3. Move to Bundled Prices for Care Cycles**
  - Combine technical fees and physician fees in a **single payment**
  - **Expand DRG** care episodes and set guidelines for bundled payment reimbursement requirements
  - Create a **bundled pricing framework** and rollout schedule

# Moving to a Value-Based System

## Leverage Points for Government

### 4. Integrate Care Delivery Across Separate Facilities

- Introduce **minimum volume standards** by medical condition

### 5. Expand Excellent IPUs Across Geography

- Encourage **affiliations** between community / rural providers and qualifying centers of excellence for complex care

### 6. Create an Enabling Information Technology Platform

- Set **standards** for common data definitions, interoperability, and the ability to easily extract outcome, process, and costing measures for all HIT systems

# Appendix

# Registries and Outcome Measurement: Next Steps for CMS

1. Define the appropriate **units of measurement**
  - Organize registries around medical conditions and patient populations
2. Provide **matching funds** to develop or improve registries that meet certain criteria:
  - Outcomes focused
  - Path to transparency
3. Fund or create a **registry think tank**
  - Provide consulting / technical assistance
  - Share best practices
  - Develop **common tools** that can be taken “off the shelf” (e.g. data auditing)
4. Create a **registry of registries** to coordinate all registry activity
  - E.g. Common data depository
  - Standardize reporting protocols
5. Address **policy hurdles** to registry functions
  - Privacy rules, IT standards, National patient identifier
6. Create a **business model / motivation** for registry reporting
  - Tie reporting to new reimbursement methods (Bundled payments, Accountable Care Organizations)
  - Tie to current reimbursement
  - Tie to provider certification or professional recognition

# Creating a Bundled Pricing System

- Defining the Bundle
  - **Scope** of the medical condition and care cycle duration
  - **Services** included, but retaining flexibility on methods
  - **Complications** and **comorbidities** included/excluded
- Pricing the Bundle: Key Choices
  - **Level** of bundled price vs. sum of current charges
  - Price **stability** commitment
  - Extent of **severity/risk** adjustment
  - Extent of “**guarantees**” by providers
  - Mechanism for handling **outliers** and **unanticipated** complications
  - Bonuses for **excellent outcomes**?
- Implementing the Bundle
  - Internal **distribution of the payment** among providers (dividing the pie)
  - **Billing and claims** processes
  - **Outcome measurement** to minimize incentives to limit value-enhancing services

- **Accurate costing** at the medical condition level is a prerequisite for negotiating bundled prices

For additional information on

**Value-Based Health Care Delivery:**
