Unlocking the Potential of Geothermal Energy: Strategic Implications for Iceland, Other Nations and the International Community

Professor Michael E. Porter Harvard Business School

Iceland Geothermal Conference Harvard Business School April 28th, 2016

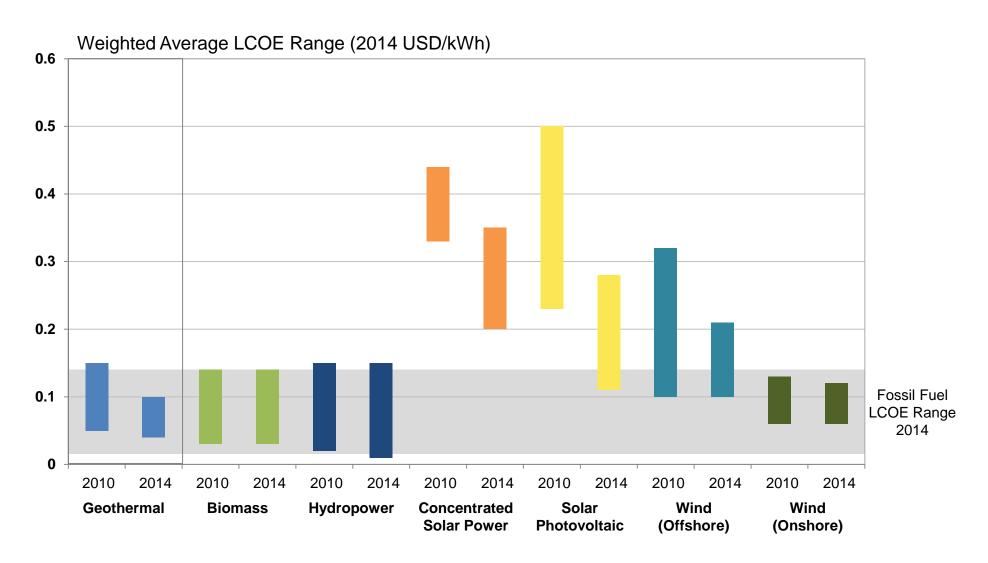

This presentation draws on ideas from Professor Porter's articles and books, in particular, The Competitive Advantage of Nations (The Free Press, 1990), "Building the Microeconomic Foundations of Competitiveness," in The Global Competitiveness Report (World Economic Forum), "Clusters and the New Competitive Agenda for Companies and Governments" in On Competition (Harvard Business School Press, 2008), "Clusters and the Great Recession" (Delgado-Porter-Stern, Working Paper 2014), "Defining Clusters of Related Industries" (Delgado-Porter-Stern, NBER 2014), "Clusters, Convergence, and Economic Performance" (Delgado-Porter-Stern, NBER 2012), "Cluster and Entrepreneurship" (Delgado-Porter-Stern, CES 2010), "The Economic Performance of Regions" (Regional Studies 2003), and ongoing related research. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means - electronic, mechanical, photocopying, recording, or otherwise - without the permission of Michael E. Porter. For further materials, see the website of the Institute for Strategy and Competitiveness (www.isc.hbs.edu).

The Potential of Geothermal

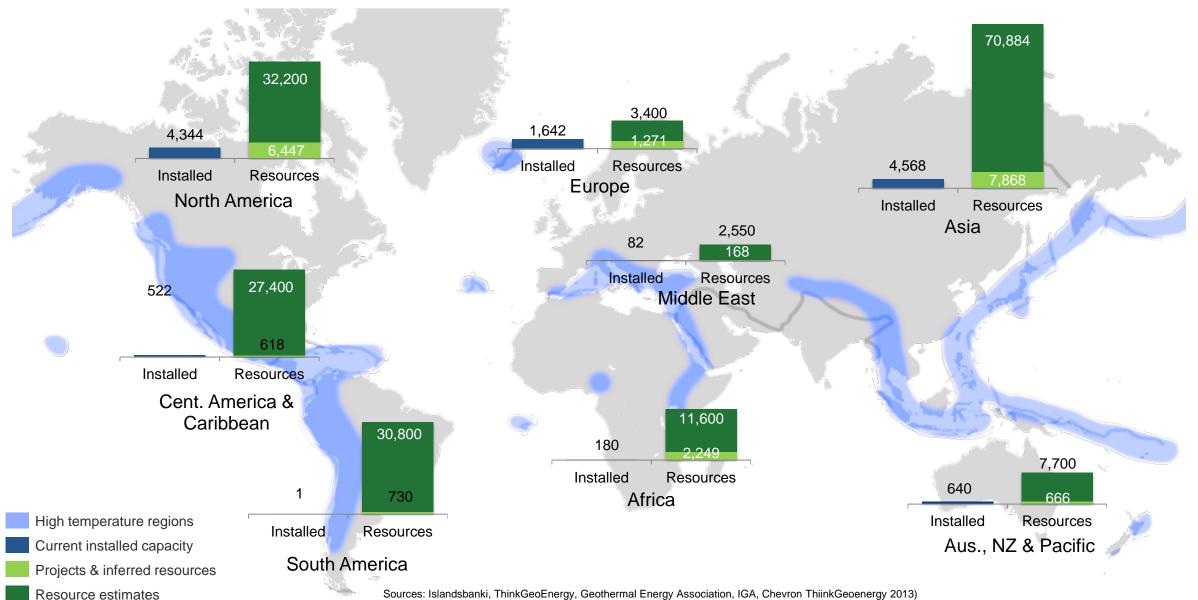

- Provides clean, sustainable energy
- Geothermal energy operates 24 x 7
- Geothermal energy has unique advantages in heating
- Geothermal energy can be exported via energy intensive products
- Expands energy self-reliance
- Geothermal resources are available in many locations with significant unmet energy needs
- The potential for combining power generation and direct use together creates major economic and societal benefits for local communities and industries (e.g. food production, heating, other energy intensive activities)

Relative Cost Position of Clean Energy Sources

Levelized Cost of Electricity (LCOE), 2010 and 2014

Geothermal Potential Globally

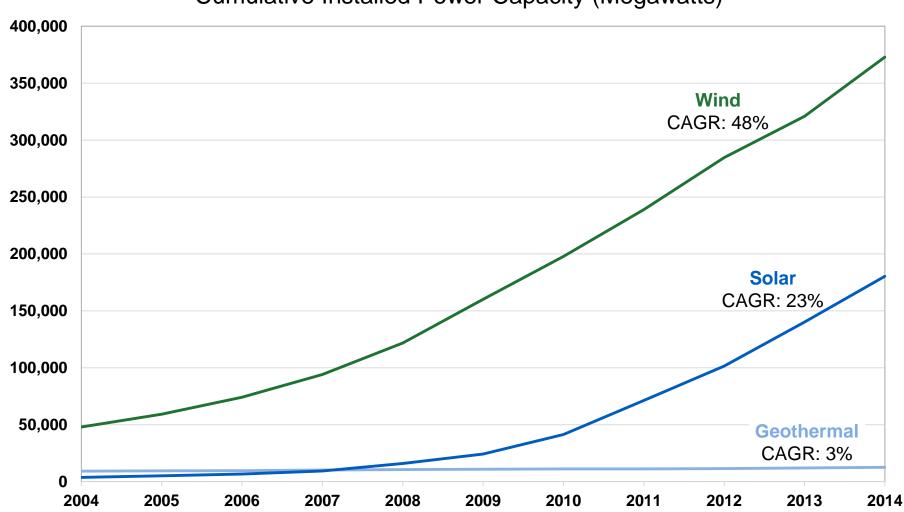

Sources: Islandsbanki, ThinkGeoEnergy, Geothermal Energy Association, IGA, Chevron ThiinkGeoenergy 2013)

Note: Installed Capacity of 2010 (2012), resource estimates combined (1999-2012) – IGA estimates a conservative total potential of 70,000 MW and with technology improvements (extended use of low heat and EGS resources) at around 140,000 MW in power generation capacity.

Growth of Renewable Energy Sources

The Future of Geothermal

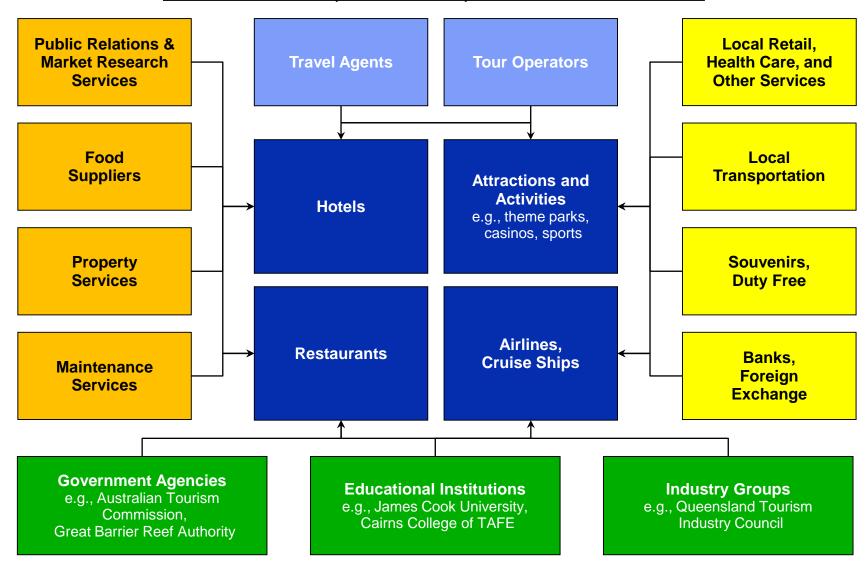

- Geothermal has significant technical and economic advantages relative to other renewable and even traditional sources of energy
- There is up-front risk in exploration and verification of the quality of the available resource
- Public policy support for renewable energy sources has been much stronger in wind and solar, despite their inferior economics

 How do the industry and governments around the world move ahead to capture the economic and social benefits of the resource?

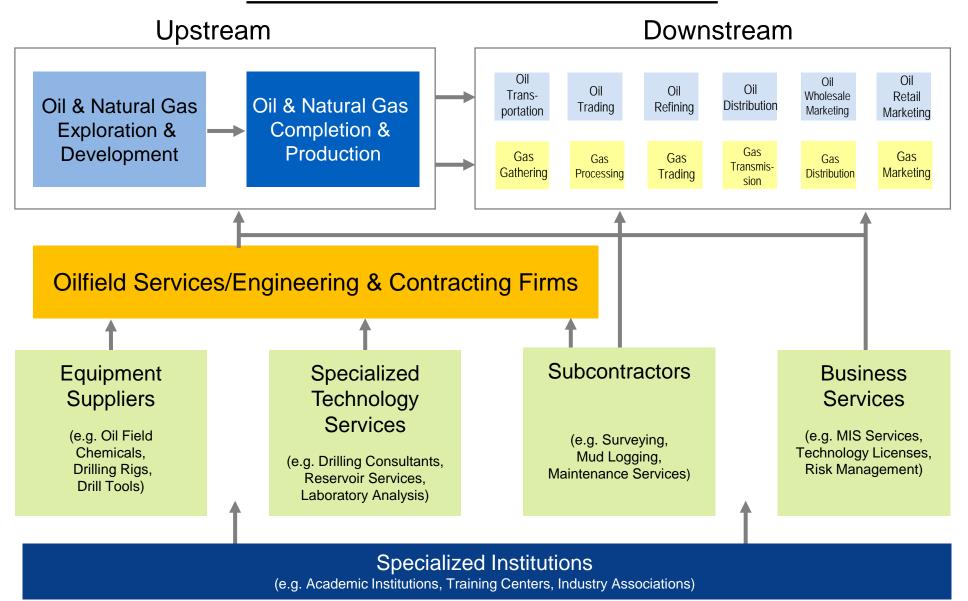

What is a Cluster?

The Cairns (Australia) Tourism Cluster

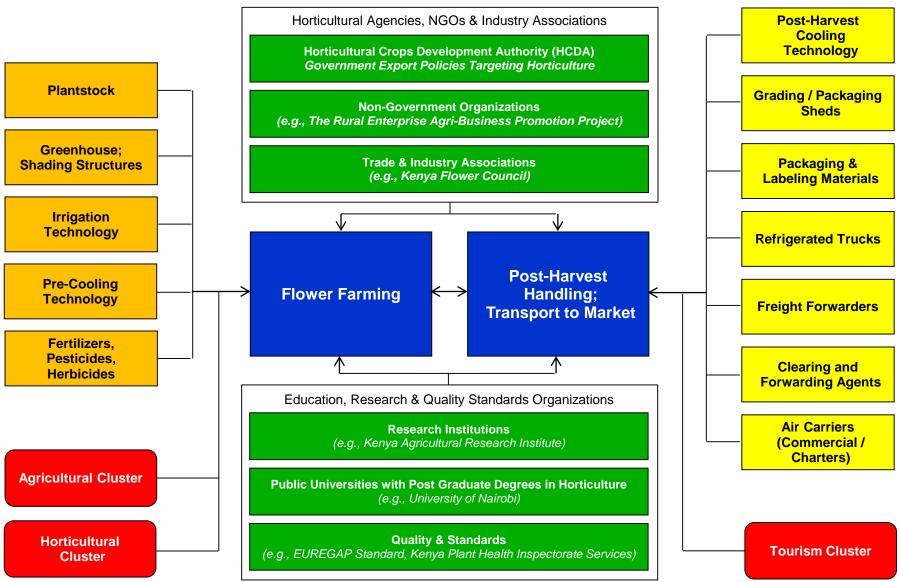

Mapping a Cluster

The Houston Oil and Gas Cluster

Clusters in Developing Countries

Cut Flower Cluster in Kenya

Assessing the Cluster Business Environment Massachusetts Life Science

Factor (Input) Conditions

- + Strong K-12 educational system
- + Strong **science base** of leading researchers and leading academic research centers
- + Frequent **technology and knowledge transfer** from research to industry
- + High availability of risk capital and federal research funding
- · Higher cost of doing business than some regions
- High cost of living, especially housing
- Shortages of mid-level professionals
- Technology transfer lagging other important regions

Context for Firm Strategy and Rivalry

- + Strong base of local companies that **compete on innovation** using cutting edge science
- + Local companies compete and cooperate intensively
- + High visibility, support and cooperation with government
- Limited manufacturing in the State, especially in pharmaceuticals

Related and Supporting Industries

- + Presence of **specialized service providers** such as law firms and consultants
- + Deep **local supplier base** in many inputs, instruments, and supplies
- + Strong collaboration institutions

Demand Conditions

- + Sophisticated local medical practitioners
- Reimbursement environment does not foster the adoption of product and process innovations in health care delivery
- High medical malpractice costs in Massachusetts may deter new treatments
- Barriers to performing clinical trials with local institutions

Why Clusters Matter?

Clusters increase productivity and operational efficiency

Clusters stimulate and enable innovations

Clusters facilitate commercialization and new business formation

• Growth and exporting across border is accelerated by cluster development

Empirical Evidence on Clusters

- Presence of strong clusters
- Breadth of industries within a cluster
- Strength in related clusters
- Presence of a region's clusters in neighboring regions

- Job growth
- Higher wages
- Higher patenting rates
- Greater new business formation, growth and survival
- Resilience in downturns

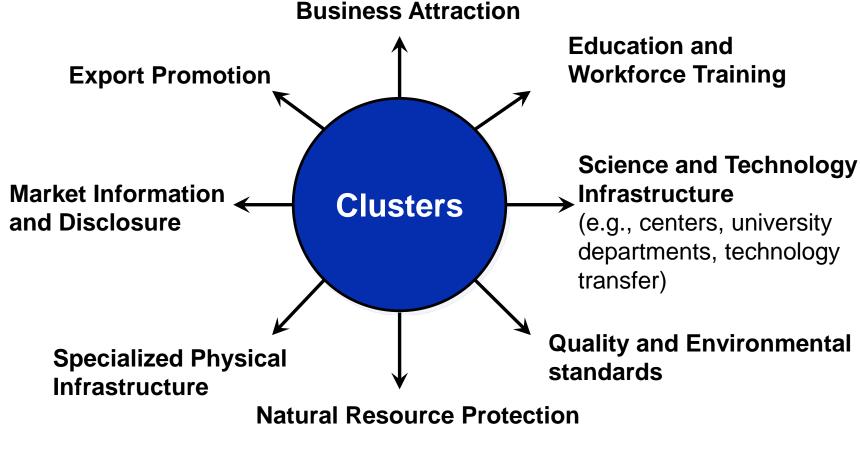

- Build on the region's existing and emerging clusters rather than chase hot fields
- Economic diversification occurs within clusters and across related clusters

Clusters as a Tool for Economic Policy

- Cluster upgrading fosters greater and more sophisticated competition rather than distorting the market
- Leverages the power of linkages across companies to drive rapid economic development
- Policies and investments strengthen multiple related firms/institutions simultaneously
- A forum for collaboration between the private sector, trade associations, government, educational, and research institutions
- Enhances the effectiveness of traditional economic policy areas, such as training, R&D, export promotion, FDI attraction, etc.

Organize Public Policy Around Clusters

 Clusters provide a framework for organizing the implementation of many public policies and public investments directed at economic development

Iceland's Role in Geothermal Energy <u>Top 10 Geothermal Energy Countries</u>

Global Geothermal Electric Capacity (GW_e)

Global Geotherma	I Direct L	Jse Capacity	/ (GW _t)
------------------	------------	--------------	----------------------

	Country	2010	2014	% of total Electric Cap	Increase (%)
1	Iceland	0.6	0.7	25.0%	17%
2	Kenya	0.2	0.5	17.0%	150%
3	Philippines	2	1.9	10.6%	-5%
4	New Zealand	0.7	1	9.8%	43%
5	Indonesia	1.2	1.4	2.7%	17%
6	Mexico	1	0.8	1.3%	-20%

The Global Footprint of Icelandic Geothermal Companies

The Icelandic Geothermal Cluster

Strong Factor Conditions

Geothermal Skill and Research Base in Iceland

• International leader in geothermal energy research

 Six month postgraduate training program aimed to improve the capacity building of developing countries in geothermal exploration and development

 Offers graduate and professional development courses in geothermal studies

Sophisticated Local Demand

Icelandic Geothermal Energy Use by Application, 2013

Leading Geothermal Companies in Iceland

Major International Players Operating in Iceland

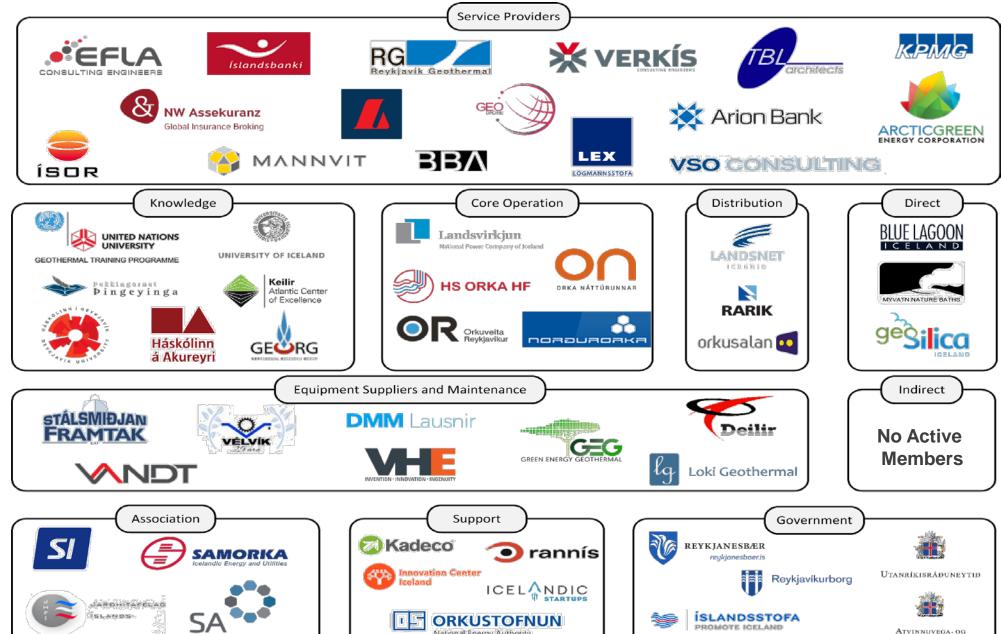

Leading Technical Consultants

SKM Australia **Borealis Geopower** Canada **Technip** France Geox Geothermische Energie Germany **EFLA** Iceland Mannvit Iceland Reykjavik Geothermal **Iceland Verlos** Iceland JFE Engineering Corporation Japan Global Synergy Link Kenya

Leading Drilling Companies

Perforadoras Santa Barbara	El Salvador
H. Anger's Sohne	Germany
Iceland Drilling	Iceland
Constructora y Perforadora Latina	Mexico
Industrial Perforadora de Campeche	Mexico
MB Century	Oman
Filtech Energy Drilling Corp.	Philippines
Podzemburgaz	Russia
Geothermal Anywhere	Slovakia
DHS Drilling	United States

Recent Activities of the Cluster Initiative

Policy Influence

- Worked with the Icelandic government and DG Energy (EU) on energy efficiency and renewable energy topics
- Represented Iceland at COP21 talks on district heating
- Initiative to increase geothermal technology patenting in Iceland starting in 2016

Export Promotion

 Signed an agreement with GEODEEP in France to create a framework of standardized model licenses for exploring and developing geothermal energy resources

Skills & Company Development

- Executive seminars for foreign business executives
- Start-up Energy business accelerator

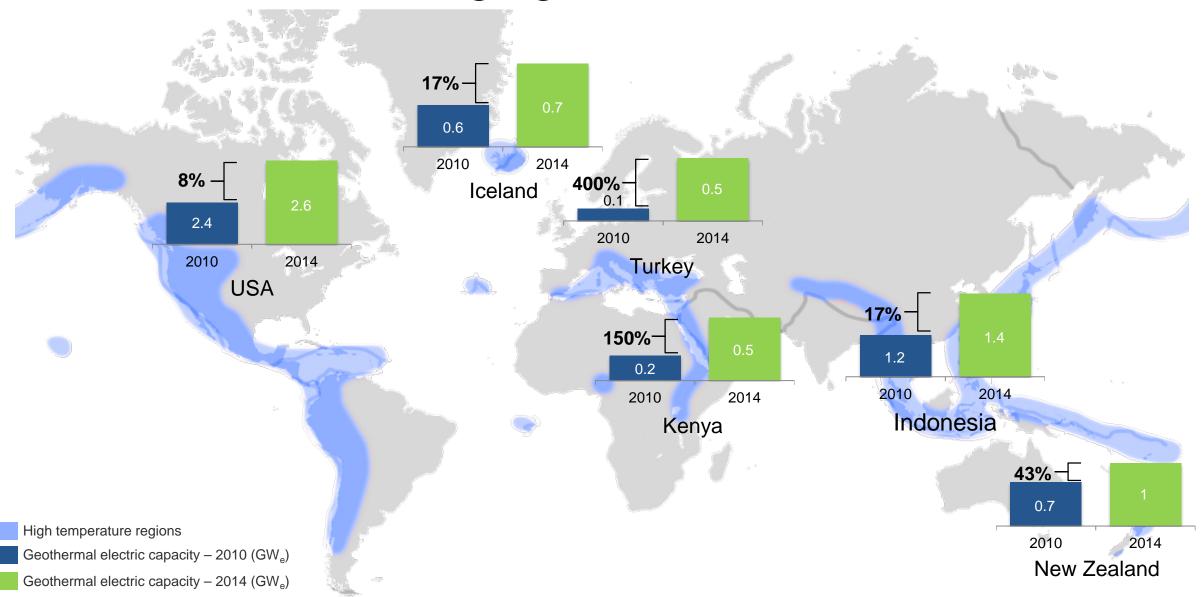

Network and Partnerships

- Promoting the concept of resource parks domestically (Northeast of Iceland) and abroad (Nicaragua)
- Cooperating with the tourism cluster initiative

Action Agenda for the Iceland Geothermal Cluster

- Fully engage government and research institutions in the cluster effort
- Connect research priorities in academic institutions with the needs of companies in the cluster
- Put stronger focus on patents as way to capture economic value of research findings
- Encourage direct collaboration between companies and research institutions
- Step up direct collaboration between companies
- Move beyond exporting discrete services to full solutions
- Enhance collaboration between companies in approaching foreign markets
- Package Iceland projects for replication internationally
- Develop financing mechanisms for geothermal projects abroad, including strong relationships with international development institution
- Create an overall strategy for marketing the geothermal opportunity globally

Global Emerging Geothermal Clusters

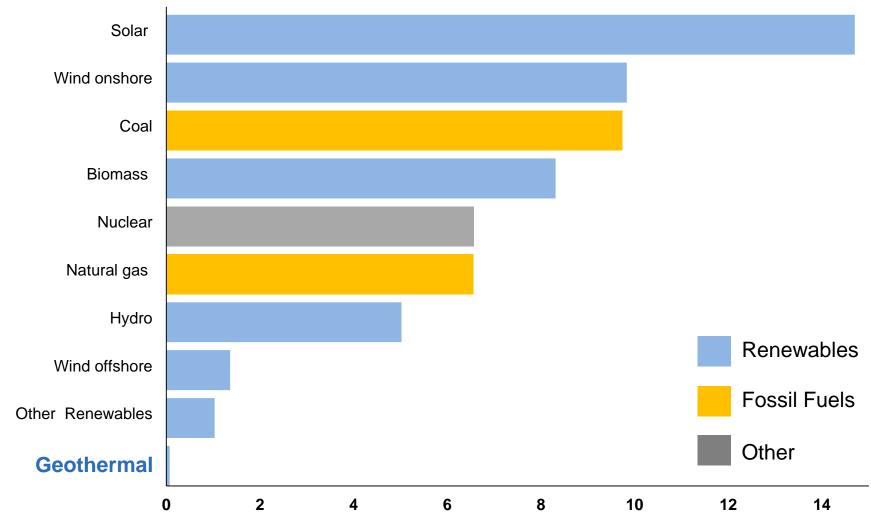

The Global Agenda

Visibility

Policy Support by Energy Source

European Union, 2012

Total support provided in the 28 Member States (in billion €2012), including EU level support

The Global Agenda

- Visibility
- Financing
 - Financing structures must be better developed, reducing reliance on limited public sector funding sources

The Global Agenda

Visibility

Financing

 Financing structures must be better developed, reducing reliance on limited public sector funding sources

Direct utilization

- Systematic integration of direct use to enhance project economics
- New kinds of government and private sector participants

Benefits of Direct Utilization

- Cascading use of geothermal energy, combining power generation with direct utilization, provides increased efficiency and improved economics
 - Only 10% net efficiency is achieved when generating electricity alone
 - Waste heat from the electricity generation process can be recovered for direct use
- Adding a secondary use, such as a greenhouse to a small (\$1m/year)
 geothermal plant can decrease payback period from 6 years to 2 years
- However, cascading use requires significant coordination among actors

Direct Utilization in Indonesia

- In West Java, Indonesia, the local government has passed legislation mandating the simultaneous development of direct use, along with electricity generation and defined a direct-use development roadmap
- One project adapted a geothermal electricity generation plant to support mushroom cultivation, enabling growth of the local agriculture
- The program expanded the mushroom growing capacity to 25,000 baglogs per month

The Global Agenda

- Visibility
- Financing
 - Financing structures must be better developed, reducing reliance on limited public sector funding sources
- Direct utilization
 - Systematic integration of direct use to enhance project economics
 - New kinds of government private sector participants
- Industry standards
- Cluster development
 - Fragmented groups of small companies must organize in cluster efforts to be able to offer integrated solutions and effectively engage government

Cluster Collaboration Across Countries
